

AI Decision & Recommendation Workflow

Entrepreneur Assessment
Collect startup information through an adaptive questionnaire.

Data Validation
Validate responses for completeness, consistency, and missing information before analysis.

Assessment & Analysis
Analyze startup readiness using maturity rules, entrepreneurial indicators, and assessment logic.

Product Readiness

Market Validation

Business Model

Financial Readiness

Team Readiness

Growth Potential

Classification
A rule-based diagnosis engine determines the startup's maturity stage based on predefined assessment criteria

Knowledge Retrieval
Relevant information is retrieved from a curated knowledge base of trusted entrepreneurial resources using Retrieval-Augmented Generation (RAG).

LLM Recommendations
The Large Language Model generates personalized, explainable recommendations by combining the diagnosis, scores, and retrieved knowledge.

Roadmap
The system creates a prioritized action plan that guides the entrepreneur toward the next stage of startup development.
