

SYSTEM ARCHITECTURE

Entrepreneur

Completes the entrepreneurial assessment and interacts with the AI platform.

Frontend (Streamlit)

Provides an intuitive interface for questionnaires, results visualization, and AI interactions.

Backend Services (Python)

Adaptive Questionnaire

Dynamically adjusts questions according to previous responses to collect relevant startup information.

Diagnosis Engine

Determines the startup maturity stage using predefined entrepreneurial assessment rules.

Explainable Scoring Engine

Evaluates startup performance across multiple entrepreneurial dimensions with transparent scoring.

Gap Detection Engine

Identifies missing capabilities, critical weaknesses, and readiness gaps.

Recommendation Engine

Generates personalized next steps based on the entrepreneur's current maturity stage.

User Profile & Progress

Stores entrepreneur assessments and tracks progress over time.

Data & AI Layer

Structured Database

Stores questionnaire responses, assessments, scores, and user progress.

Knowledge Base

Contains trusted entrepreneurial resources including Startup Act information, incubators, funding programs, regulations, and support organizations.

RAG Module

Retrieves the most relevant knowledge base documents before generating AI responses.

Large Language Model (LLM)

Produces personalized explanations, recommendations, summaries, and conversational assistance.

Personalized Entrepreneur Report

Presents diagnosis, explainable scores, recommendations, roadmap, and AI-generated guidance.
